

SIS 419-008 Syllabus

Climate and Social Vulnerability

Spring 2022

Wednesday 2:30 – 5:00 PM

Online: Zoom Link on Blackboard

Classroom: TBA

Professor: Jesse Ribot

Email: Ribot@American.edu

Office: Zoom

Office Hours: By Appointment

Preferred Communication Method: e-mail

Bio: Ribot is a professor of environmental politics with a focus on climate and vulnerability. He taught in the Department of Geography at University of Illinois in Urbana-Champaign from 2008 to 2018. Before 2008, he was a senior associate of the World Resources Institute, and taught in the Urban Studies and Planning department at MIT. He is an Africanist studying local democracy, resource access and social vulnerability.

Course Description

Vulnerable, at risk, prone, fragile, precarious – coping, secure, adapted, resilient. What do these terms mean? How do they and the concepts behind them inform our approach to reducing the likelihood of damage in the face of climate stress? Climate extremes and climate change call for and justify policies to protect exposed and sensitive individuals and groups. Why, however, are these people vulnerable in the first place? How does gender, ethnicity, race, caste, class, religion, place of origin, age, profession, education shape people’s risk? Who is vulnerable and how did they come to be exposed and sensitive? We live in a world of haves and have nots, of the secure and insecure, the included and excluded. What processes generate extreme precarity for some? People need protection from storms and droughts. But to protect them we need to understand why they are vulnerable so we can treat the social and political-economic causes behind their vulnerability – the forces within society that expose them and push them to the edge. Without vulnerability, natural events are manageable. With vulnerability, these events become ‘hazards’ that can push people over that edge – off the cliff of precarity. This course focuses on the social roots and the reduction of vulnerability. We will explore: 1) causes of climate-related vulnerability; and 2) practices and policies designed to reduce economic loss, hunger, famine and dislocation in the face of climate trends and events.

Analysis of the causes of disaster is also socially and politically fraught. Causal analysis links damages to responsibility, blame and liability. Thus, analytic frameworks for evaluating the cause of climate-related vulnerability are contested. But cause also indicates potential solutions. As we explore frames and methods for the causal analysis of climate-related vulnerabilities, we will discuss this tension around causal analytics. We will focus on the multiple policy scales that affect vulnerabilities of poor and marginal populations, drawing on cases primarily from the developing world – although applicable everywhere. The project for this seminar-style course will be the writing of a short policy brief or a short research proposal.

The course provides students with a critical theoretical base and policy-analytic skills applicable to increasing security and wellbeing of the poor. In this course you should learn to: 1) evaluate the causes of climate-related vulnerabilities; 2) critically read and understand climate-related literature; 3) identify and ask policy-relevant social science research questions about climate-related vulnerability; and 4) to improve your writing.

SIS Undergraduate Program Learning Outcomes *Relevant to Capstones*

- Learning Outcome #1: Demonstrate critical thinking as evidenced through both written work and oral presentations.
- Learning Outcome #4: Understand and apply theories and models from appropriate disciplines including political science, history, and economics to international affairs.

AU Core Learning Outcomes required for Capstones

- Application: Build on prior knowledge, skills, or dispositions in a new context.
- Synthesis: Identify and execute a significant project that addresses a substantive disciplinary or professional concern.
- Reflection: Articulate the knowledge, skills, or dispositions gained during the student’s undergraduate experience or used in the project.

Table of Contents

Course Assignments	v
<i>Course Assignment Summary (detailed descriptions in Annex A)</i>	v
<i>Obtaining Weekly Assigned Readings</i>	v
<i>Grading</i>	v
CLASS ASSIGNMENTS AND SCHEDULE	1
Week 1 (Jan 12): Introduction – Reading Vulnerability I	1
Week 2 (Jan 19): Reading Vulnerability II – on definitions and the locus of cause	2
<i>Discussion: What is a Policy Brief – what is a ‘problem’?</i>	4
<i>Discussion: What is a Policy Research Proposal – what is a ‘problem’?</i>	4
<i>PROJECTS: Your Project Abstracts are Due by Class Next Week</i>	4
Week 3 (Jan 26): Reading Vulnerability II – on definitions and the locus of cause	4
<i>PROJECTS: For next week, please bring in a research question/policy problem to discuss with class</i>	4
<i>Discussion of your Policy Brief/Research Proposal ideas in class today</i>	4
<i>PROJECTS: Your Project Abstracts are Due by Class Today</i>	4
Week 4 (Feb 2): Central Concepts I: Entitlements	5
<i>Discussion of your Policy Brief/Research Proposal ideas in class today</i>	6
<i>Schedule Term-Paper Presentations for week 6 to 14</i>	6
<i>Presentation Schedule Table</i>	6
Week 5 (Feb 9): Central Concept II: Property, Belonging and Authority	6
Week 6 (Feb 16): Central Concepts II: Capabilities	7
<i>Scheduled Brief and Research-Proposal Presentations in Class – see Annex A for Presentation Instructions</i>	8
Week 7 (Feb 23): Central Concepts III: Vulnerable Livelihoods – Bringing in the Environment	8
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	9
Week 8 (Mar 2): Central Concept IV: Structure and Structural Violence	9
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	10
No Class on March 9th – Spring Break!	10
Week 9 (Mar 16): Covid – A Revelatory Crisis	10
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	11
Week 10 (Mar 23): Progressive Contextualization as Analytic Method	11
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	11
Week 11 (Mar 30): Adaptation & Resilience – Solutions?	12
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	13
Week 12 (Apr 6): On Responsibility and Response: Cause and Blame in the Anthropocene?	13
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	13
Week 13 (Apr 13): Climate Response – Racism, Justice and Human Rights	13
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	15
Week 14 (Apr 20): Wrapping Up	15
<i>Synthesis Discussion</i>	15
<i>Scheduled Brief and Research-Proposal Presentations in Class</i>	15
<i>PROJECTS: Final term-paper project is due by 11pm on the Wednesday after this last class via e-mail & on Canvas</i>	15
<i>The End of Course!</i>	15

Recommended Additional Readings	50

Course Assignments

Course Assignment Summary (detailed descriptions in Annex A)

- **Read Annex A** and come to the 1st class with questions about the assignments.
- **Weekly readings** – you must read the assigned readings.
- **Weekly written 75-word maximum comments on readings** – to be submitted on Canvas. Include at least one discussion question and at least one quote from the readings that surprised or struck you. Due at noon one day prior to the day of each class. See Annex A for format of the file title and this assignment. This assignment must not exceed 75 words – the size of this bullet point.
- **Policy Brief or Research Proposal Term Paper** – a policy brief or research proposal (2000-word maximum: this includes the abstract but does not include your bibliography, budget, or work plan). Abstract due Week 3. The final project is due by 11pm on the Wednesday after our final class of the semester. See format and content in Annex A.
- **Term Paper Presentation** – you will each present your term papers in class. Each of you will also act as a discussant on someone else’s term paper. See Annex A for details. For this presentation, you will have to write up a one-page summary of your project that you will share with your discussant.
- **Individual ‘office’-hour meetings** – You can meet with me individually on Zoom. Set up an appointment by e-mailing me some proposed times. Best times are 12p to 2pm.

Obtaining Weekly Assigned Readings

All required readings are available on Canvas under ‘Course Reserves’ or ‘Files’, or their URL is in the Syllabus. If they are not available or you cannot access them on the Canvas system, you are responsible to let me know (e-mail me), so I can fix the problem or send you a copy. Most readings should also be accessible through the library system, even if you cannot get them on Canvas. Note that I may change the readings as the semester progresses – as we discover new and interesting readings to include, and as our focus develops, we may drop some readings. Changes in the readings will be announced in class.

Grading

Assignment	% of Grade	N.B.
Weekly 75-word comment and questions on readings	20% (2% each)	You can miss 4 without penalty – extra credit for handing in all of them
Term Paper	45%	Term Paper Abstract is included in this grade
Term-paper Presentation	15%	Includes your 1-page overview
Participation in class	20%	Includes discussant roles

Fifty percent of the grade in each assignment is based on the instructor’s judgment of progress of students *from where each of you start* at the beginning of the semester and the *effort* you put into learning. The grades will then be based on resulting assignment scores. The course is not graded on a curve; thus, it is not possible to give a grading chart.

CLASS ASSIGNMENTS AND SCHEDULE

NOTE:

Readings will change during the semester – these are a first cut at what we will cover

Week 1 (Jan 12): Introduction – Reading Vulnerability I

Introduction

- Structure of the Course – the Syllabus
- Focus on the Rural Developing World
- Assignments
 - Readings – FLEXIBLE!
 - Discussant Roles
 - Written Commentaries
 - Term Papers
- What is vulnerability – your understandings
- What is vulnerability – my understanding, framings
 - Definitions of Vulnerability
 - Identifying Vulnerability
 - Quantifying Vulnerability
 - Explaining Vulnerability
 - Effects and Functions of Vulnerability
- Reading Vulnerability
 - Multiple meanings derived from context – indicator or analytic & which analytic
- Discipline your minds to think, read and write differently! Use words with great care! I will take points off your grades for misuse of words like:
 - Natural Disaster
 - Vulnerability to Climate
- Assign Week 2 Discussants for “Reading Vulnerability”

Lecture: From Hazards to Vulnerability

I will present the case of Migration from Senegal to Europe based on my recent research. The objective is to Define Vulnerability and Illustrate Causal Chains.

- Ribot, Jesse. 2018. Climate Refugees. Four-minute video. ICLD:
<https://vimeo.com/292115641>
 - Policy Brief to accompany Video: Schöfberger, Irene. 2018.

Required Reading on Causes of Climate Change versus Causes of Vulnerability¹ – Page Count: 63+3315+2+8 = 121

- Patel, Raj and Jason W. Moore. 2017. "Introduction," pp. 1-43, and "Cheap Nature," pp. 44-63, *A History of the World in Seven Cheap Things: A Guide to Capitalism, Nature and the Future of the Planet*. Berkeley: University of California Press. Pp. 63
- Fraser, Nancy. 2021. "Climates of Capital: For a Trans-Environmental Eco-Socialism," *New Left Review* 127: 94-127. Pp. 33
- Davis, Janae, Alex A. Moulton, Levi Van Sant, Brian Williams. 2019. "Anthropocene, Capitalocene, ... Plantationocene?: A Manifesto for Ecological Justice in an Age of Global Crises," *Geography Compass*. 13:e12438:1-15. Pp. 15
- O'Keefe, Phil, Ken Westgate and Ben Wisner. 1976. "Taking the naturalness out of natural disasters. *Nature*," 260, 566-567. Pp. 2
- Schöfberger, Irene. 2018. "Environmental change and translocal vulnerability in Senegal," German Development Institute/ Deutsches Institut für Entwicklungspolitik (DIE) Policy Brief Issue 3, Vol. 4. Pp. 8. See: https://publications.iom.int/system/files/pdf/policy_brief_series_vol4_issue3.pdf.

Today's readings are to help us move from thinking about the causes of climate change – very important to evaluate – to thinking about the causes of damages that are often associated with crises that follow climate events or climate change events.

In preparation for today's class: Before this initial class session, after reading the assigned articles, please read one academic or journalistic article that you can find online or in newspapers on climate and 'vulnerability'. Be prepared to tell us about what you read. Pay specific attention to how the author(s) define(s) vulnerability and what her/his/their assumptions are about the causes of vulnerability. Also, come in with a definition of vulnerability that *you* think is intuitively obvious and perhaps even 'operationalizable' such that you could use it to study vulnerability (i.e., defined in such a way that you could identify and measure 'vulnerability' if you saw it). Please also look over the syllabus.

Week 2 (Jan 19): Reading Vulnerability II – on definitions and the locus of cause

Definitions of vulnerability explicitly or implicitly identify a problem and its causes. How do different authors define vulnerability? What do they view as the problem? Where do they locate causes of vulnerability? What do they view as being vulnerable? To what outcome are vulnerable things or people vulnerable? What does each of these authors consider to be the 'social' question concerning climate and climate change? This set of readings includes examples and arguments that support the need for a clear definition and understanding of the theoretical and historical underpinnings of vulnerability. Read them for the kinds of definitions of

vulnerability-related terms (risk, vulnerability, precarity, fragility, danger, adaptation, resilience, exposure, sensitivity, hazard) implicit or explicit in their writings. Read them for where they place causality itself – the origins of fragility or danger.

Required Readings on Vulnerability Frames and Social Cause (suggested additional readings for each week are in endnotes)^{2,3,4,5}

Page Count: 12+26+7+20+35 = 100 + Sample Briefs 4+2+8 = 14; Total = 114 pages

Cheltenham: Edward Elgar. With preface titled “Cause and Blame in the Anthropocene – Vulnerability still does not just fall from the sky” [Reprint of Ribot 2010 with new forward and minor updates.] Pp. 164-199. Pp. 35

Required Reading Sample Proposal [The Sample Proposals are under ‘Files’ on Canvas.]

- Sample Research Proposal: Ramprasad. Pp. 20
 - Accompanying Article: Ramprasad, Vijay. 2018. “Debt and vulnerability: indebtedness, institutions and smallholder agriculture in South India,” *The Journal of Peasant Studies*, DOI: 10.1080/03066150.2018.1460597. To link to this article: <https://doi.org/10.1080/03066150.2018.1460597>. Pp. 22

PROJECTS: For next week, please bring in a research question/policy problem to discuss with class

What problem do you want your policy brief or research proposal to address? Think of a problem concerning the causes of climate-related disasters that you want to interrogate. Be concrete. Be specific. Tell us where this problem is and for whom it is a problem.

Discussion of your Policy Brief/Research Proposal ideas in class today

PROJECTS: Your Project Abstracts are Due by Class Today

Week 4 (Feb 2): Central Concepts I: Entitlements

In this class, we discuss the basic elements of the entitlements approach to the analysis of vulnerability. There are basically three approaches you will come across in your readings. Hazards literature characterizes the consequences of events on static communities. They view risk as being an attribute of a hazard (event or trend). The entitlements literature gives us a basis for understanding the social and political-economic causes of risk, viewing risk as residing within a social organization (rather than as something that comes from the sky). Integrated approaches build on entitlements (using the 'livelihoods' literature) while exploring the links between social organization and context.

Video viewing: West Bengal Famine 10-minute video:

<https://www.youtube.com/watch?v=9hHODTy77FE> – watch this at home before reading Sen.

This is a very famous famine and it is the famine that Amartya Sen based his analysis of the causes of famine.

Required Entitlements Readings^{6,7,8}

Page Count: 8+16+16+15+30+18 + Proposals: 10+20 = 30; Total: 133 pages

- Sen, A. 1980. "Famines," *World Development* 8(9): 613–621. Pp. 8
- Drèze, Jean and Amartya Sen. 1989. *Hunger and Public Action*. Oxford: Clarendon.
 - Ch. 1: Introduction. Pp. 3-19. PP. 16
 - Ch. 2: Entitlements and Deprivation. Pp. 20-34. PP. 16
 - Ch. 4: Society, Class and Gender. Pp. 46-61. PP. 15
- Fine, Ben. 1997. "Entitlement Failure" *Development and Change* Vol. 28, 617-47. Pp. 30.
- Watts, Michael. 1991. Entitlements or Empowerment? Famine and Starvation in Africa. *Review of African Political Economy*. Vol. 51, pp. 9-26. Pp. 18

More Required Readings – Sample Research Proposals

- Sample Research Proposal: Colette – approximately 10 pages – on Canvas
- Colette, April. 2019. "Normalizing Discourses: Urban Flooding and Blaming the Victim in Modern Santa Fe, Argentina," Ch. 5, pp. 87-107 in Lisa Reyes Mason and Jonathan Rigg (eds.) *People and Climate Change: Vulnerability, Adaptation and Social Justice*. Oxford: Oxford University Press. Pp. 20 [This is an article from the research done following the above proposal]

Week 5 (Feb 9): Central Concept II: Property, Belonging and Authority

The concept of ‘entitlement failure’ enabled researchers to reframe famine and other crises as an outcome of social and economic relations – rather than viewing crises as results of food shortage or absolute scarcity alone. Yet ‘entitlements’ are a very legalistic concept that misses many of the social and political-economic factors that shape people’s access to food and other resources they need to survive and thrive. Would an ‘access failure’ model be more powerful than an ‘entitlement failure’ model? What would the difference be? These readings are designed to get us to think systematically about the distinction between entitlement and access and how the latter might enable us to deepen the analysis to include such factors as identity, belonging, citizenship, and structural relations of production and exchange. These also shape why people suffer in the face of climate variability and change.

Required Property, Belonging, Authority and Security Readings⁹

Page Count: 28+8+4+18+15+11+63+31+60+40 = 275; + proposal writing: 8+10=18 pp.; total = 296 pages – to be pared down to about 200 pages as we decide which pieces to read.

Required Readings on Research Proposals & Brief Writing

- [Adam Przeworski and Frank Salomon. The Art of Writing Proposals. https://www.fordham.edu/download/downloads/id/3367/Social_Science_Research_Council_SSRC_On_the_Art_of_Writing_Proposals.pdf](https://www.fordham.edu/download/downloads/id/3367/Social_Science_Research_Council_SSRC_On_the_Art_of_Writing_Proposals.pdf). Pp. 8
- Lund, Christian. 2014. Of what is this a case? Analytical movements in qualitative social science research. *Human Organization*, 73(3): 224-34. Pp. 10

Week 6 (Feb 16): Central Concepts II: Capabilities

Entitlements theory is powerful and useful. It does not, however, take everything into account. It has some limits that researchers on risk and famine should be aware of. This week’s readings aim to highlight some variables that are otherwise beyond the scope of an entitlements analysis. In particular, entitlements theory carries certain limited ideals of property, law, and justice. Where are the limits of these? Sen introduced ‘capabilities’ as his way around these limits. What are the limits to the capabilities approach? Both entitlements and capabilities are frequently evoked in international development interventions and the climate vulnerability and

adaptation literature, so understanding these approaches and being aware of their limitations is crucial when we think about climate change and adaptation.

Required Readings on *Capabilities*¹⁰

Page Count: 18+3+24+21+14 = 80 pages.

- Sen, Amartya. 1984. Rights and capabilities. In: A. Sen (ed). *Resources, values and development*. Oxford: Basil Blackwell, pp. 307-24. Pp. 18
- Sen, Amartya. 1997. Editorial: Human Capital and Human Capability *World Development* Vol. 25, No. 12, pp. 1959-1961. Pp. 3
- Bebbington, Anthony. 1999. Capitals and Capabilities: A framework for analysing peasant viability, rural livelihoods and poverty. *World Development*, 27(12), 2021-44. Pp. 24
- Nussbaum, Martha. 2001. Adaptive preferences and women's options. *Economics and Philosophy*, 17: 67-88. Pp. 21
- Osmani, S.R. 2005. Poverty and Human Rights: Building on the capability approach. *Journal of Human Development*, 6(2), 205-219. Pp. 14

Scheduled Brief and Research-Proposal Presentations in Class – see Annex A for Presentation Instructions

Week 7 (Feb 23): Central Concepts III: Vulnerable Livelihoods – Bringing in the Environment

This section outlines an approach to analyzing the causal structures of vulnerability in the face of environmental variability and change. How do we take environmental and social forces into account? What are the gender, class, caste, ethnic, and other social divisions along which vulnerability is differentiated, produced, and reproduced? How do we identify the causes of that vulnerability? How do different authors 'bring the environment' into an entitlements or a broader political-economy approach? Livelihoods approaches are widely used in the analysis and treatment of poverty, vulnerability, and the enhancement of 'adaptation' and 'adaptive capacity' (to be discussed in more detail anon). What does a livelihoods approach contribute to an understanding of the causes and persistence of vulnerability? How does this approach help to identify pathways toward reduced vulnerability? The Environmental Livelihoods literature deals with these issues of social stratification in access to and dependence on the environment. These articles will allow us to explore different theoretical approaches with different mixes of agency and structure behind them.

Required Readings^{11,12}

Page Count: 26+26+30 = 82 pages.

- Agrawal, Arun. 2010. The role of local institutions in adaptation to climate change. In: R. Mearns and A. Norton (eds). *Social dimensions of climate change: Equity and vulnerability in a warming world*. Washington, DC: The World Bank, pp. 173-198. Pp. 26. Available at: <http://documents.worldbank.org/curated/en/2009/01/11486596/social-dimensions-climate-change-equity-vulnerability-warming-world>
- Ayers, Jessica. 2011. "Resolving the adaptation paradox: Exploring the potential for deliberative adaptation policy-making in Bangladesh", *Global Environmental Politics*, 11(1), 62-88. Pp. 26.
- Ribot, Jesse, Papa Faye and Matthew Turner. 2020. "Climate of Anxiety in the Sahel: Emigration in Xenophobic Times," *Public Culture*. Vol. 32, No. 1. Pp. 45-75. Pp. 30

Scheduled Brief and Research-Proposal Presentations in Class

Week 8 (Mar 2): Central Concept IV: Structure and Structural Violence

Crises often follow events such as droughts or storms. But what about the actions, policies, social and political-economic arrangements that place people at risk before these natural hazards arrive? How do we theorize, analyze, and think about the causes of precarity that predate or are not directly and visibly implicated in crisis?

Required Readings on Structural Violence¹³

Page Count: 24+2+28+20 = 74 pages

This group of papers worked beautifully for discussion!

- Galtung, Johan. 1969. "Violence, Peace, and Peace Research," *Journal of Peace Research* V. 6, Pp. 167-91. Pp. 24
 - Read this article for his definition of violence and how he relates it to the structural. What are the implications of this piece for the analysis of the causes of climate-related vulnerabilities? What analytic tools does it give us?
- Bourdieu, Pierre. 1997. La précarité est aujourd'hui partout : Intervention lors des Rencontres européennes contre la précarité. Grenoble. 12-13 décembre 1997. *Contre-feux*, Ed. Liber Raisons d'agir, Grenoble. [available online : http://natlex.ilo.ch/wcmsp5/groups/public/---ed_dialogue/---actrav/documents/meetingdocument/wcms_161352.pdf]. Pp. 2 [If you do not read French, someone who does will explain the piece in class.]
 - Read this too with an eye to how the idea of precarity helps us understand the causes of vulnerability as structural.

- Rose, Nicholas. 1996. Death of the Social? Re-figuring the Territory of Government. *Economy and Society*. Vol. 25, No. 2, Pp. 327-54. Pp. 28
- Farmer, P. 2004. An Anthropology of Structural Violence. *Current Anthropology*, 45(3), 305-25. Pp. 20

Scheduled Brief and Research-Proposal Presentations in Class

No Class on March 9th – Spring Break!

Week 9 (Mar 16): Covid – A Revelatory Crisis

How did covid19 change the way we think about the causes of vulnerability in America? What does the covid19 crisis say about climate and vulnerability in the US and the World? Paul Farmer (2020), read earlier, starts us on this discussion of how to explain disease – the social etiology of illness.

Apocalypse – Old English, via Old French and ecclesiastical Latin from Greek *apokalupsis*, from *apokaluptein* ‘uncover, reveal’, from *apo-* ‘un-’ + *kaluptein* ‘to cover’.

Revelatory crisis

Covid ripped the covers off
stark naked
warts and all
revealed

Precariat
gig work
1099 or W2

We see who’s who
who are you?
have or have not?
hand to mouth...

just don’t touch your face.

Jesse Ribot 31 March 2020

Readings on Covid as Revelatory Crisis¹⁴
Page Count: 24+9+6+11+12 = 62 pages.

SISU 419 Capstone

- Soloway, J.S. 1994. Drought as a 'Revelatory Crisis': An Exploration of Shifting Entitlements and Hierarchies in the Kalahari, Botswana. *Development and Change*, Vol. 25, pp. 471-95. Pp. 24.
- Dzingirai, Vupenyu, Lindiwe Mangwanya, Melissa Leach, Annie Wilkinson, Sally Bukachi, 2017 "Structural drivers of vulnerability to zoonotic diseases in Africa," *Philosophical Transactions B* 372: 20160169. Pp. 9 See: <https://royalsocietypublishing.org/doi/pdf/10.1098/rstb.2016.0169>.

Dark and bright spots in the shadow of the pandemic: Rural livelihoods, social vulnerability, and local governance in India and Nepal. *World Development*. 141 (2021) 105370 Pp. 1-12. Pp. 12

Scheduled Brief and Research-Proposal Presentations in Class

Week 10 (Mar 23): Progressive Contextualization as Analytic Method

How do we analyze the causes of vulnerability? Earlier readings frame its components, but how do we move from identifying vulnerability to explaining it? Explanation is one way of identifying potential solutions. It is not the only way. Think through how useful explanation is in helping us to reduce vulnerability. What helps us respond? Identification? Explanation? Innovation? Under what conditions do these different approaches help?

Required Readings on Method^{15,16}

Page Count: 31+13+29 = 73 pages

- Bhaskar, R. 1998. "Philosophy and Scientific Realism," in *Critical Realism: Essential Readings*, M. Archer, R. Bhaskar, A. Collier, T. Lawson and A. Norrie (eds.), London: Routledge, pp. 16-47. Pp. 31
- Bennett, A. 2010. Process tracing and causal inference. Ch. 10 in Henry Brady and David Collier (eds.). *Rethinking Social Inquiry*. Rowman and Littlefield. Pp. 13
- Cronon, William. 1992. A place for stories: Nature, history, and narrative. *The Journal of American History*, (March), 1347-1376. Pp. 29

Scheduled Brief and Research-Proposal Presentations in Class

Week 11 (Mar 30): Adaptation & Resilience – Solutions?

This class elaborates on the concepts of ‘adaptation’ and ‘resilience’. What becomes of vulnerability in this literature? To what degree does the forward-looking gaze of adaptation occlude the causes of vulnerability? Think about where adaptation shifts the focus toward or away from issues that the vulnerability analytic framings focus on. How do these adaptation framings bring power into play or obscure power issues? What happens to issues of causality and responsibility as one moves toward an adaptation framework? With the resilience readings, think about how to identify theories and definitions implicit in articles and books on climate and vulnerability or adaptation. Also, try to catalog in your mind the different ways in which the different authors link human and ecological systems. Interrogate implicit social and political-economic theories in these analysts’ writings. What are the social theories behind discussions of adaptation and resilience? Does a ‘systems’ approach bring in broader political-economic and social dynamics? What does it capture, and what does it miss?

Work in some language in the above paragraph so that it states that resilience contrasts with vulnerability – as resilience (like adaptation) is forward looking and vulnerability looks back and asks ‘why’.

Readings on Adaptation and Resilience

Page Count: 17+3+3+9+17 = 49 pages

Required Readings on Adaptation^{17,18} and Resilience¹⁹

- Beymer-Farris, B.A., T.J. Bassett and I. Bryceson. 2012. Promises and pitfalls of adaptive management in resilience thinking: The lens of political ecology. Ch.16, pp. 283-299 in T. Plieninger and C. Bieling (eds). *Resilience and the cultural landscape*. Cambridge: Cambridge University Press. Pp. 17
- Oliver-Smith, A. 2013. A matter of choice (editorial). *International Journal of Disaster Risk Reduction*, 3, 1-3. Pp. 3
- Morrissey, J. 2014. Addressing the political deficit in climate adaptation. *Aljazeera*, 19 May 2014. See: <http://www.aljazeera.com/indepth/opinion/2014/05/climate-adaptation-africa-2014519103948475231.html> Total = about 3 pages.
- Watts, Michael J. 2015. Adapting to the Anthropocene: Some Reflections on Development and Climate in the West African Sahel. *GeoJournal* 53(3):288-97. Pp. 9
- McDonnell, Siobhan. 2019. “Other Dark Sides of Resilience: Politics and Power in Community-Based Efforts to Strengthen Resilience,” *Anthropological Forum*, 30(1-2): 55-72. DOI: 10.1080/00664677.2019.1647828 To link to this article: <https://doi.org/10.1080/00664677.2019.1647828>. [Brings ‘participation’ into question] Pp. 17

Scheduled Brief and Research-Proposal Presentations in Class

Week 12 (Apr 6): On Responsibility and Response: Cause and Blame in the Anthropocene?

Nobody has the right to obey.
- Hannah Arendt

We want to understand causes in order to identify solutions. Indicating causality, however, is contentious because it can lead to responsibility, blame, and liability. While those indicated as responsible may not like it, *responsibility is key, to response* – it identifies who should act and provides incentive (as in potential punishment). This section is designed to help us think through the relation between cause and response. This relationship is at the core of responsibility – and thus, it is contentious and often then pushed out of conversations. Nobody likes the fingers pointed at them. So, nobody wants causal analyses that make them responsible or liable. This means that causes are often hidden in ways that make solutions difficult. Here we will discuss this contentious arena in which the social, via the denial of causality, becomes another part of the cause of climate-related crises.

Required Reading on Responsibility²⁰

Page Count: 1+17+18 = 36

- Taddei, R. 2008. Blame: The hidden (and difficult) side of the climate change debate. *Anthropology News*, pp. 45-6. Pp. 1
- Rudiak-Gould, P. 2015. "The social life of blame in the Anthropocene," *Environment and Society: Advances in Research*, 6, 48-65. Pp. 17
- Ribot, Jesse. 2022. "Framing Causality and Responsibility: The Social Nature of Climate-related Crises. *Journal of Peasant Studies*. Forthcoming. Pp. 18 – to be posted under Files on Canvas.

Scheduled Brief and Research-Proposal Presentations in Class

Week 13 (Apr 13): Climate Response – Racism, Justice and Human Rights

Rights are central to any policy response to anything. They shape how policy is made and received. This section gives us some sense of the current reflections on justice in the climate arena. It starts with a classic piece and then gets into more radical concepts that are often not taken into account in the arena of climate-related vulnerability.

Readings on Racism, Justice²¹

Page Count: 18+4+8+6+5+5 = 46

- Jennifer Franco, Clara Mi Young Park & Roman Herre. 2017. "Just standards: international regulatory instruments and social justice in complex resource conflicts," *Canadian Journal of Development Studies*, 38:3, 341-359, DOI: 10.1080/02255189.2017.1298520. To link to this article: <http://dx.doi.org/10.1080/02255189.2017.1298520>. Pp. 18
- O'Donoghue, Amy. 2015. "Sovereign Exception: Notes on the Thought of Giorgio Agamben," in *Critical Legal Thinking — Law and the Political*. <https://criticallegalthinking.com/2015/07/02/sovereign-exception-notes-on-the-thought-of-giorgio-agamben/>. Pp. 4
 - VIDEO on Bare Life – worth viewing to understand Weheliye's use of Agamben: Agamben Homo Sacer Animatic - YouTube <https://www.youtube.com/watch?v=pGUxQmRNhtk> 8 minutes
- Weheliye, Alexander G. 2014. *Habeas Viscus: Racializing Assemblages, Biopolitics, and Black Feminist Theories of the Human*. Durham: Duke University Press.
 - Introduction Pp. 8
 - Ch. 7, Deprivation: Hunger Pp. 6
- Kashwan, Prakash. 2020. "American environmentalism's racist roots have shaped global thinking about conservation." *The Conversation*. September 2, 2020. <https://theconversation.com/american-environmentalisms-racist-roots-have-shaped-global-thinking-about-conservation-143783>. Pp.~5
- Kashwan, Prakash and Jesse Ribot. 2021. "Violent Silence: Erasing History and Justice in Global Climate Negotiations & Action." *Current History*. November Issue. Pp. 326-331. Pp. 5

Some potentially interesting related videos:

- "The Story of Eco-Fascism: The Dark History of Environmentalism" See PATREON video too: <https://www.youtube.com/watch?v=FkhmP7yDWeY>
- The video is from "[Our Changing Climate](#)", it is a team led by one guy who does video essays on various topics related to climate change. For this particular video the title is "Climate Change's White Supremacy Problem" and follow on articles here: <https://www.notion.so/Eco-Fascism-Resources-3e50d3139007429ba1920dfab2404d4a>

Scheduled Brief and Research-Proposal Presentations in Class

Week 14 (Apr 20): Wrapping Up

Synthesis Discussion

Scheduled Brief and Research-Proposal Presentations in Class

PROJECTS: Final term-paper project is due by 11pm on the Wednesday after this last class via e-mail & on Canvas

Please Review This Class! It is important. I want your feedback and suggestions!

The End of Course!

Are you thinking differently about vulnerability?

Annex A: Course Assignments

Class Assignment Format and Submission Procedures

IMPORTANT NOTE: All assignments must be in 12-point font and single-spaced. All assignments must be handed in to me via my e-mail: Ribot@American.edu AND posted on Canvas. The electronic copies of all assignments must be submitted in Word (**NO GOOGLE DOCS or .pdfs**), and the file title must start with your last name, followed by the assignment title. So, if you are Anna Eggplant, then the file should be titled: **Eggplant Anna Week 3 Reading Comment.doc (or .docx)**, or **Eggplant Anna Abstract.doc**. Inside the file, you must also have your name and submission date written at the top of the page.

Written Comments on Weekly Readings

Weekly comments on the readings should touch on each article and should not exceed 75 words per week (minimum 12-point font, single spaced, 1.5-inch margins). Limit your comments to 75 words! These can be in a paragraph format or in bullet points, as you prefer. Please submit these to me on Canvas by noon of the day before class.

- Some ideas for what to include in your comments:
 - a. Include at least one discussion question and at least one quote from the readings that surprised or struck you – i.e., what do you find new and surprising.
- Think about the following when you read:
 - b. What do the articles contribute to theory – what is new in them?
 - c. What are the key questions the articles evoke?
 - d. Vis-à-vis your own interests, what do you find surprising, new and interesting in the articles, and why?
 - e. What are some strengths and shortcomings of the articles?
 - f. Compare and contrast the arguments or theoretical positions of the different articles where possible.
 - g. What was incomprehensible to you in the articles? What did you not understand?
 - h. From the readings, is there a memorable quote strikes you?

This assignment is designed so that you come in with good discussion questions grounded in the readings. 75 words gives you plenty of space. You must read all of the required readings each week. You should touch on as many of the readings as you can in your comment, but if you have something more to say about one or two or contrast two, that is fine. Just be certain to have read everything – without doing so, you will be lost in the class discussions.

Term Paper Writing Project

The writing assignment for this course is a **2000-word (Maximum) Term Paper in the form of a Policy Brief or a Research Proposal.**

Reference Style

Please use in-text references in all of your writing assignments. So, Ribot (2018:4) said “the world is round.” Then republicans announced that it is a rhombus with spikes (Trump 2019:745; Guliani 2020:17). Note that all claims must be supported in a text by a reference or an argument. In your bibliography, use whatever style you are comfortable with – but be consistent. If you do not have a preference, you can use the same style I use for the readings assigned in this class.

Note on Bibliography Style

Be consistent. Use a reference style in your reference list or bibliography that gives the full citation as you would see it in an article or book. You can also use the style I use in this syllabus. Choose a style and stick with it.

Term Paper Abstract

Everyone must submit a 150-word abstract that describes your intended project on the week specified in the syllabus. Start with a title! Provide a good pithy project title that reflects something to catch the interest of the reader – a title that indicates that the reader will discover something new and interesting.

For Your Policy Brief Abstract: The abstract must specify the problem you are addressing, for whom it is a problem, why the problem is important, what kinds of solutions you hope to propose for this problem, and who will implement your proposal and with what resources. Be specific. Your problem needs to be something that can be assessed, evaluated and responded to in the real world. Please also include a bibliography with at least five key documents you will use for background – add a line under each that says what you expect that article/document will provide. I will provide feedback in the week after you submit your abstracts.

For Your Research Proposal Abstract: The abstract must specify the problem you are studying, your research question, the case to be studied and why it is important or interesting. Be specific. Your problem needs to be something that can be studied in the real world or assessed and evaluated and responded to in the real world. Please also include a bibliography with at least five key documents you will use for background – add a line under each that says

what you expect to use that article/document for. I will provide feedback in the week after you submit your abstracts.

Be prepared to informally discuss your abstract/project idea in class – tell us the problem you'll work on, why it is a problem and for whom, the main question or issue and why you think it is important. Please be prepared to tell us who your audience is.

In-Class Presentation of your Term-Paper Project

You will present your Term Paper in class. Presentation structure is also described below – after the assignment description. For your presentation, you are required to assign one reading to the class. It can be a theory piece or case study that informs your project. Everyone will read this in preparation for your presentation. You must have this assigned reading ready and distributed one week prior to the date you are to present.

Policy Brief Assignment Term Paper

To write a policy brief will require defining your audience (an activist group, an NGO, a national or international policy maker or a local policy maker on a rural council); a discussion of the presenting problem and why it is being addressed now; an analysis of the dimensions and causes of the problem; a proposed set of solution options; a proposed implementation strategy.

The Policy Brief term paper is 2000 words maximum. This word limit means that the brief must be sharply written and focused. For this project you are to pick a policy problem related to vulnerability in the face of climate change. Choose a general issue that is recognized somewhere and already being discussed or a specific reform that is in progress. Or, you can choose a new issue that you think needs attention. Explain the problem, justify the need for intervention, review the literature, and write up targeted policy recommendations (concerning which agencies should make which reforms). You can follow the sample policy brief outline below.

For a few sample policy briefs I have written, see www.jesseribot.com publications (<https://www.jesseribot.com/publications>) and click on “policy research briefs” by publication types. Many can also be found online. There are many formats out there to inspire you.

A typical policy brief has the following components (this is just an example—you can use a different outline if you wish):

- I. Title – that really expresses your main point in a catchy way
- II. Executive summary (one page)
 - a. State who your audience is (i.e. who should be reading this brief)

- b. Define the problem
- c. Convince the audience the problem is grave
- d. Convince them it should be a priority
- e. Tell them something new (research findings, experience elsewhere, theoretical arguments) that indicates that policy should change
- f. Summarize your argument
- g. Summarize your recommendation
- III. Background
 - a. State the problem why it is a problem and for whom it is a problem
 - b. Develop your case for change
 - i. What does the literature say
 - ii. What does new research say
 - iii. What does history tell us
 - iv. Analyze the problem
 - v. Analyze the options for solving the problem
 - vi. Weigh the options and conclude with an argument for your choice of options
- IV. Recommendations
 - a. List of recommendations that follow from your analysis
 - i. Including who should be doing what and with what resources.
- V. Bibliography

The Policy Brief will be graded based on a) your concise and comprehensive executive summary, b) the provision of convincing and clear introduction and background, c) the coherent use of any case or theoretical material you can draw on from the course (i.e. citing and productively using materials we have read), d) the use of a broader literature (to frame, illustrate and deepen your argument), e) clear recommendations that plausibly indicate *Who* should do *What* and *With Which* resources. I will also pay attention to your framing and use of 'vulnerable' in our writing – this is a key concept in this course and requires attention when being used in description and analysis.

A Policy Research Proposal Term Paper

The Research Proposal term paper is 2000 words maximum. Please identify a research question you would want to pursue were you doing a Ph.D. Write a full research proposal. The best approach is to identify a funding agency and use their template (you may actually want to apply for a grant – such as a Fulbright or other funding to do field research). You can also follow my outline of a research proposal presented below. The research proposals will be judged and ranked as if they were submitted to an actual funding agency.

This project requires:

1. identifying your problem;
2. identifying the audience you are writing to;
3. developing a policy research question or hypothesis;
4. locating it within the literature;
5. explaining its broader policy significance (that is, making it clear why anyone should care about what is being investigated and what might be found);
6. explaining what data are necessary for answering the question;
7. explaining the methods to be employed for obtaining and analyzing the data (i.e. tracing out how empirical observations will be related to the question or hypothesis);
8. estimating a timeline; and
9. estimating funding needs.

A policy research question addresses an unresolved problem (related to climate adaptation or vulnerability reduction) that has policy relevance. The question must also have theoretical relevance—let us know how answering it will contribute to the broader understanding of this problem for instances other than your particular case. At a minimum, your proposal should identify a problem where better understanding or information is likely to help us to formulate a better solution.

A typical policy-research proposal has the following components. This is just an example—you can use a different outline if you wish. I suggest that you use the Fulbright, SSRC or NSF formats or the format of a grant you actually intend to apply for (if you do so, the above page limits, font size, and double spacing still apply.)

- I. Title
- II. Abstract—150 words max
- III. Introduction
 - a. Problem statement
 - i. What is the problem to be explored
 - ii. Why is it important and to whom is it important
 - b. Summary of debates around the problem
 - c. Summary of hypothesis and research questions
- IV. Background—What does the literature have to say about your problem
- V. Research Questions and Hypotheses
- VI. Case
 - a. Where you are going to study your problem
 - b. Why this is an advantageous place for studying your problem
- VII. Methods
 - a. How you get from your questions to answers
 - b. Timeline

- VIII. Budget
- IX. Bibliography

One useful way to organize a methods discussion is to break down the problem as follows:

Hypothesis or Primary Research Questions	Operational Questions	Data Required to answer operational questions	Methods for gathering data
<p>Q: How many deaths did Cyclone Idea cause?</p> <p>H1: The number of deaths attributable to the cyclone is dependent on the analytic frame chosen.</p> <ul style="list-style-type: none"> • A hazards frame will attribute all deaths to the cyclone • A social-causal frame will attribute deaths to underlying vulnerabilities in place <p>H2: Better communication would reduce fatalities that follow cyclones in this region</p>	<p>H1Q1: How many deaths are attributed to the cyclone under a Vulnerability model?</p> <p>H1Q2: How many deaths are attributed to the cyclone under a Hazards model?</p> <p>H1Q3: What assumptions in the models explain differences found?</p>	<ul style="list-style-type: none"> • Post cyclone death statistics • A vulnerability analysis of causes of death • A hazards assessment of damages following the storm • Documents with the analyses that can be evaluated for the assumptions explicit and implicit in the frames used 	<ul style="list-style-type: none"> • Statistical analysis • Analytic methods of vulnerability and of hazards analysis • Document review and analysis – discourse analysis • Interviews of those who conducted analyses of damages and deaths
	<p>H2Q1: In places deaths occurred following the storm, what early warnings were communicated.</p> <p>H2Q2: In places with different early warning messages were linked differences in death tolls?</p>	<ul style="list-style-type: none"> • Data on early warning practices place by place • Data on who in official positions knew what when • Data on who in affected places heard what when • Data on damages and deaths in each of these areas 	<ul style="list-style-type: none"> • Government documents • Interviews with those in government communications roles • Interviews of those in affected zones • Surveys • Document review

Democracy Research Question Example

Hypothesis or Primary Research Questions	Operational Questions	Data Required to answer operational questions	Methods for gathering data
<p>Hypothesis 1: Decentralization reforms leads to better representation.</p> <p>Hypothesis 2: More democratic representation leads to more efficient forest management</p> <p>Question: What is the relation between representation and forestry management outcomes before and after decentralization reforms?</p>	<p>How has representation changed over time (before and after decentralization)?</p>	<p>Measure of representation (i.e. accountability plus responsiveness) change over time in each case:</p> <ul style="list-style-type: none"> -Change in accountability -Change in responsiveness -Change in citizen engagement -Change in popular demands being reflected in decisions being taken 	<p>Measures before and after decentralization policy implementation of:</p> <ul style="list-style-type: none"> -Observation of sanctioning by population -Surveys of popular demands -Surveys of decision maker understanding of popular demand -Observation of decision making processes -Decisions (or policies) made
	<p>How have outcomes varied over time (before and after decentralization reforms)?</p>	<p>Measure of outcomes over time</p> <ul style="list-style-type: none"> -Change in forest management -Change in hectares under management -Quality of forest health -Change in local income from forests 	<ul style="list-style-type: none"> -Observation and historical interviews concerning change in forest management -Documentation of forest service of forests under management -Transect studies of ligneous density and species mix before and after decentralization reform

This table is just an example from a local democracy research program—in the problem definition or background section you would also have to define your variables and explain what theory has to say about the relations—and why you expect a particular kind of relation.

Some Useful literature on proposal writing

- Professor Michael Watts' essay "The Holy Grail: In Pursuit of the Dissertation Proposal" is, well, just that – a "holy grail" – essay dedicated to demystifying the process and offering concrete advice on the dos and don'ts:
<http://iis.berkeley.edu/sites/files/pdf/inpursuitofphd.pdf>
- NSF grant reviewer tells all
<http://www.sciencemag.org/careers/2003/04/nsf-grant-reviewer-tells-all>
- NSF Merit Review – look over.
Criteria that NSF grant reviewers hold the proposals to. Note that these are kind of flexible depending on what discipline and sub-discipline we may apply to. The section "Merit Review Facts" may be useful. http://www.nsf.gov/bfa/dias/policy/merit_review/
- Some useful resources for helping in proposal writing – look over:
<http://iis.berkeley.edu/DissPropWorkshop>
- Lund, Christian. (2014). Of what is this a case? Analytical movements in qualitative social science research. *Human Organization*, 73 (3), 224-34.

Class Presentations – How to Structure

Time Allotment in Sessions

- Your Presentation: 10 minutes
- Discussant: 3-5 minutes
- Class Discussion: Remaining 10 minutes
 - 7 minutes with author gagged (not allowed to intervene)
 - 3 minutes with author involved

Presenter Role

Each of you will be expected to present your project to the class. In class you will present your work in less than 10 minutes. Please be sure to cover the materials in the outlines above or below.

Discussant Role

The discussant will take 3 to 5 minutes to comment, and class, facilitated by the discussant, will discuss your work for 7 more minutes without the presenter intervening. Presenter can then enter discussion for last 3 minutes. The discussant's role is to give some constructive feedback on your project and to help lead a discussion. Discussants should ask about whether each of the elements of a proposal are present and what more needs to be done to develop the elements in the outline below. It is also often helpful for the discussant to try to simply repeat back to the author what they understand the core problem to be. This is usually a very productive exercise for the author. The discussant also plays the role of facilitating class engagement.

Please use the following outlines (or the sample briefs or research proposal outlines above) for your presentation – just to make sure that these elements are present in your presentation. Discussants and the class can also use these outlines to make sure you have covered what you should have touched on.

Presentation Outline for Research Proposals

Please make sure that these elements are present in your presentation:

- a. The problem you are addressing and why it matters and to whom
- b. The questions you are asking and any hypotheses you may be entertaining
- c. The case study you will examine
- d. The theoretical framing you will employ/interrogate/critique
- e. The data required to ask your question or interrogate your hypothesis
[remember this is a research proposal, so you do not need the data or literature, you need to tell us what *kinds* of data.]
- f. The methods you will use to collect the data you have described.

Presentation Outline for Policy Briefs

Please make sure that these elements are present in your presentation:

- a. The problem you are addressing and why it matters and to whom (those affected)
- b. Who the audience is for your brief (i.e. those who discuss and act on your proposal)
- c. The case or area your policy brief is focused on
- d. Theories or arguments you will draw on when framing your brief
- e. Background materials required to understand the causes of the problem you are tempting to address
- f. The kinds of solutions you hope to propose (stated as who will do what and with what resources in order to solve the problem you identified)

Annex B: What is a Capstone Course

The official description is: The capstone course is specifically designed to provide the summative academic experience for our undergraduate students. The capstone affords them the opportunity to sum up their accumulated learning. A Senior Capstone class should itself be integrative, as well as giving students the opportunity to work on a summative project of their own: readings should draw on international studies broadly understood, assembling whatever conceptual pieces are needed to make sense of the topic of the class, regardless of subfield, thematic area, discipline, or whatever. Professors should be bold, demanding, but supportive and fair in their design of these peak SIS undergraduate experiences. Capstone projects should be designed to enable students to integrate their previous coursework and allow them to demonstrate the skills and competencies that they have gained during their time with us. For some students this may be a research paper; for others, a documentary film; for still others, a piece of international service on which they reflect in a systematic way. Capstone courses are topical, much like First Year Seminars; they are not specifically tied to any thematic area, and they have as their prerequisite only the successful completion of at least one of the 300-level core courses in one of the thematic areas, and the successful completion of the second-level methodology requirement through SISU-306 Topics in IR Research or an approved equivalent, so that the student will have had the experience of doing some original research in an upper-division course before plunging into the capstone course.

Capstone Courses officially have the following two learning outcomes:

1. Demonstrate critical thinking as evidenced through both written work and oral presentation.
2. Understand and apply theories and models drawn from appropriate disciplines, including political science, history, and economics to international affairs.

I approach the capstone experience by giving you readings and assignments that bring theory and practice together in both oral presentation and in a written term paper.

Annex C: Some Key Areas *not* Covered in Class this Semester

Social Contracts and The Precariat

Required Readings on Social Contracts and Vulnerability²²

Page Count: 3+17+16+17 = 53

- Adger, W.N., T. Quinn, I. Lorenzoni, C. Murphy and J. Sweeney. (2013). Changing social contracts in climate-change adaptation. *Nature Climate Change*, Vol. 3, 330–333. PP. 3 [Also relevant for issues of responsibility.]
- O’Brien, K., B. Hayward and F. Berkes. 2009. Rethinking social contracts: Building resilience in a changing climate. *Ecology and Society*, 14 (2), Article 12. Total = 17 pages.
- Monck, R. “The Precariat: A View from the South” *Third World Quarterly* 34:5, pp. 303-319. PP. 16
- Pelling, M. and K. Dill. 2009. Disaster Politics: Tipping points for change in the adaptation of Socio-political Regimes. *Progress in Human Geography* 1-17. Pp. 17.
<https://doi.org/10.1177/0309132509105004> [Post disaster relief politics of legitimation.]

Food Security & Food Sovereignty

Required Readings:

- Wittman, Hannah. 2009. “Reworking the metabolic rift: La Vía Campesina, agrarian citizenship, and food sovereignty,” *Journal of Peasant Studies*, 36: 4, 805 — 826. Pp. 21
- Watts, Michael J. 2013. “Thinking the African Food Crisis,” Oxford Handbooks Online. Oxford: Oxford University Press. See: www.oxfordhandbooks.com
- Watts, Michael J. 2014. “A Political Ecology of Environmental Security,” *Environmental Security Vol. XX, pp. 82-101. Pp. 19*
- Des Gasper. 2014. “Human Security Analysis as a Framework for Value-Oriented Governance: The Example of Climate Change” *International Journal of Social Quality* 4(2), Winter 2014: 6–27, Pp. 21
- Edelman, Marc. 2014. “Food sovereignty: forgotten genealogies and future regulatory challenges,” *The Journal of Peasant Studies*, 41:6, 959-978, DOI: [10.1080/03066150.2013.876998](https://doi.org/10.1080/03066150.2013.876998). Pp. 19
- Edelman, Marc, Tony Weis, Amita Baviskar, Saturnino M. Borras Jr, Eric Holt-Giménez, Deniz Kandiyoti & Wendy Wolford. 2014. “Introduction: critical perspectives on food sovereignty,” *The Journal of Peasant Studies* Vol. 41, No. 6, 911–931. Pp. 20
- McMichael, Philip. 2014. “Historicizing food sovereignty,” *The Journal of Peasant Studies* Vol. 41, No. 6, 933–957. Pp. 24
- Agarwal, Bina. 2014. “Food sovereignty, food security and democratic choice: critical contradictions, difficult conciliations,” *The Journal of Peasant Studies*, 41:6, 1247-1268, DOI: [10.1080/03066150.2013.876996](https://doi.org/10.1080/03066150.2013.876996) Pp. 21

Justice and Governing

Required Readings

- Forsyth, T. and T. Sikor. 2013. Forests, development, and the globalization of justice. *The Geographical Journal*, 179 (2), 114-121. Pp. 8

- Forsyth, T. 2014. "Climate Justice is not Just Ice," *Geoforum* 54:230-32.
- Oldekop, J. A., L.B. Fontana, J. Grugel, N. Roughton, E.A. Adu-Ampong, G.K. Bird, S. Wallin, A. Dorgan, M.A. Vera Espinoza, D. Hammett, E. Agbarakwe, A. Agrawal, N. Asylbekova, C. Azkoul, C. Bardsley, A.J. Bebbington. (2015). *A hundred key questions for the post-2015 development agenda*. Climate Response: Adaptation Policy

These readings familiarize us with climate change policy from the scale of Global Institutions and to the ideas about what climate adaptation policy should and could look like. We will also explore a draft policy handbook from the Responsive Forest Governance Initiative if it is ready for this class.

- Leach, Melissa and Ian Scoones. 2013. "Carbon forestry in West Africa: The politics of models, measures and verification processes. *Global Environmental Change*. Vol. 23, pp. 957-967.
- United Nations International Strategy for Disaster Reduction. 2005. Building the Resilience of Nations and Communities to Disaster: An Introduction to the Hyogo Framework for Action. United Nations International Strategy for Disaster Reduction: Geneva. 'Hyogo Framework for Action 2005–2015.' Total = 6 pages. [Worth reading since it comes up on the other articles and is very technocratic framing – typical of disaster relief.]
- Schipper, E.L.F., 2006. Conceptual history of adaptation in the UNFCCC process. *Review of European Community and International Environmental Law* 16, 82–92. Total = 11 pages.
- Burton, I. S. Huq, B. Lim, O. Pilifosova, and E.L. Schipper. 2002. "From Impact Assessment to Adaptation Priorities: The Shaping of Adaptation Policy." *Climate Policy*, Vol. 2, pp. 145-149. [goes with Schipper 2006, above. Useful for Vulnerability comparative structures proposals]. Total = 5 pages. [Could have lived without this one.]
- McDonald, Robert. 2006. "Sustainable Development as Freedom," *International Journal of Sustainable development & World Ecology* Vol. 13, pp. 445-447. Total = 3 pages. [Not very interesting except last few pages where democracy is traded for conservation. Perhaps could be in a different section on democracy and environment – a first reading.]

- Kelman I, Gaillard J-C (2008) Placing climate change within disaster risk reduction. *Disaster Advances* 1 (3): 3-5. Total = 3 pages. [Great polemic should be read next to the other Gaillard and Mercer article below. Move down or vice versa.]
- Moser, Caroline. 2007. "Introduction" Pp. 1-14 in Caroline Moser, Ed. *Reducing Global Poverty: The Case for Asset Accumulation*. Washington: Brookings Institution Press. Total = 14 pages.
- Prowse, Martin and Lucy Scott. 2008. "Assets and Adaptation: An Emerging Debate" *IDS Bulletin* Vol. 39, No. 4, pp. 42-52. [Cf. Moser] <http://www.odi.org.uk/sites/odi.org.uk/files/odi-assets/publications-opinion-files/3431.pdf>. Total = 11 pages.
- Gaillard J-C, Mercer J (2013) "From knowledge to action: Bridging gaps in disaster risk reduction," *Progress in Human Geography* 37 (1): 93-114. Total = 22 pages. [Excellent piece. Illustrates the struggle to bring vulnerability analysis into climate disaster relief.]

Vulnerability in the Urban Environment: A Focus on Katrina

Although we have already read pieces that discuss vulnerability in cities (e.g. Pelling, Rain), in this class, we will focus on the US context and, in particular, the structural and historical conditions that made Hurricane Katrina such a tragic disaster. No other event in recent past has brought so starkly into relief the complex underlying race and class relations that shape landscapes of risk in urban America.

Migration and Risk

Migration is a great opportunity and a risk. It is an option for reducing vulnerability, despite that it reflects vulnerability and generates new vulnerabilities. How do we treat migration in the context of climate change and the analysis of the causes of social vulnerability?

Required Readings on Migration and Risk²³

- Ribot, J., Papa Faye and Matthew Turner. Forthcoming (2020) 'Climate of Anxiety in the Sahel: Emigration in a Xenophobic Anthropocene', *Public Culture*. Forthcoming, vol. 32 (1). This article was accepted in August 2018. This journal is very slow. If you would like a copy, please write me directly. Pp. ~20

- Cronon, W. 1992. A place for stories: Nature, history, and narrative. *The Journal of American History*, (March), 1347-1376. Pp. 29 [Also used in section on methods]

- Cook, Benjamin I., Ron L. Miller, and Richard Seager. 2009. "Amplification of the North American 'Dust Bowl' drought through human-induced land degradation," *PNAS* vol. 106 no. 13 4997–5001.
- Hansen, Zeynep K. and Gary D. Libecap. 2004. "Small Farms, Externalities, and the Dust Bowl of the 1930s," *Journal of Political Economy*, vol. 112, no. 3. Pp. 665-694.

More readings on Migration

This lecture explores migration as a climate-related phenomenon. The first lecture in August dealt with analytic framings through the lens of climate change. There we saw that climate change was not the cause and migration was not the problem. Today we will go into a little more depth on these same issues.

Defining Vulnerability & Related Terms – a living document

Jesse Ribot 2011 Definitional Notes

I keep a running update of this set of definitions. You can give me feedback if you like and help me to update this list. I have not bothered since 2011 – despite that two IPCC reports have already updated their definitions. The basic ide of this document is to help readers sort through the jungle of definitions that ultimate steer attention toward different problems and different causes.

“...safety, and lack of it, are set up in the time before disaster happens.”
(Hewett 1997:22)

“...it has been shown repeatedly that starvation primarily affects, uproots and kills the already hungry.”
(Hewett 1997:36)

Vulnerability: From the Latin root *vulner*, to wound plus *able*, given to, tending to or able to. In its most basic form vulnerability means the ability to be wounded (Oxford English Dictionary 1979). Vulnerability is usually portrayed in negative terms as “being prone to or susceptible to damage or injury” (Blaikie et al. 1994:9). To be vulnerable is to be at risk of a wound or negative outcome. Vulnerability is, as Hewett (1997:26-7) states, ‘is an attribute of persons or activities

and aspects of community', that 'arises from everyday life', and 'describes a potential state of affairs'. He continues, 'I am vulnerable to things that can happen to me, but they may not'. Nelson, Adger and Brown (2007:396) define vulnerability as "the susceptibility of a system to disturbances determined by exposure to perturbations, sensitivity to perturbations, and the capacity to adapt."

Climate-related vulnerability: The Intergovernmental Panel on Climate Change (IPCC) defines climate-related vulnerability as 'The degree to which a system is susceptible to, or unable to cope with, adverse effects of climate change, including climate variability and extremes. Vulnerability is a function of the character, magnitude, and rate of climate variation to which a system is exposed, its sensitivity, and its adaptive capacity' (Houghton et al. 2001; McCarthy et al. 2001 cited in Füssel and Klein 2006:305). Another common definition in the climate literature is 'the degree to which a system, subsystem, or system component is likely to experience harm due to exposure to a hazard, either a perturbation or stress/stressor' (Turner et al. 2003a:8074). Climate-related vulnerability has also been defined 'the characteristics of a person or group in terms of their capacity to anticipate, cope with, resist, and recover from the impact of a natural hazard. ... It involves a combination of factors that determine the degree to which someone's life and livelihood is put at risk by a discrete and identifiable event in nature or society' (Blaikie et al. 1994:9). 'In all formulations, the key parameters of vulnerability are the *stress* to which a system is *exposed*, its *sensitivity*, and its *adaptive capacity*.' (Adger 2006:269). Climate scientists tend to use the term to mean likelihood of a climate event to occur and have an 'impact' where vulnerability is a function of a hazard, while social scientists tend to stress people's ability to cope with stresses in which vulnerability is a state of the social system (Brooks 2003:2-4).

To what are people or things vulnerable? Many scholars and practitioners consider people or systems to be *vulnerable to hazards*, including trends or events such as progressive desertification or floods (Ionescu et al. 2005). But, this is not consistent with the definitions above—since these are not harms or outcomes, they are insults. Rather, people are *vulnerable to outcomes*, such as economic loss, hunger, or dislocation. This distinction generates confusion in the literature. If 'the system' is vulnerable to climate events, then the analysis may focus on the nature and probability of those events. If it is vulnerable to being wounded, then analysis may productively start by examining the damages and their multiple causes. In any analysis of vulnerability, it is critical to distinguish whether vulnerability should be defined with respect to an external stressor or with respect to an undesirable outcome (Füssel and Klein 2006: 305; Füssel 2007:156-6).

What is vulnerable? In some usages the term vulnerability is applied only to people (Downing 1991; Blaikie et al. 1994; Cannon, Twigg and Rowell n.d.:6; Sen 1981). Some apply the concept to places or ecosystems (Metzger et al 2005 in Füssel 2007:157). Other theorists and

practitioners apply vulnerability to systems, environments, livelihoods or economies (IPCC in McCarthy et al. 2001). This distinction too introduces confusion into debates. To avoid confusion, Blaikie et al. (1994:25) consider that *people* are vulnerable, *places*, such as marginal lands or dangerous work environments, are 'unsafe', *livelihoods, settlements locations, environments, or infrastructure* are 'unsafe', 'fragile' or 'unstable'. One suggestion is to call vulnerability of people 'social vulnerability' and vulnerability of ecosystems or things 'biophysical vulnerability' (Brooks 2003:3).

Starting-point vulnerability or contextual vulnerability: This approach views climate change as processes of climate-society interactions. Climate change and variability occur in political, economic, institutional and social context. The exposure unit is affected by climate and by this broad context in which it is located. Climate is viewed here as altering the biophysical world, altering the context in which exposed individuals or communities respond to other ongoing processes. People are vulnerable to negative outcomes, the causes are multiple and climate is one cause among many that shapes the biophysical world and therefore has effects on the political economic and social factors that shape vulnerability. The analysis here starts with the location or origination point of the vulnerability—the unit at risk. (O'Brien et al. 2007:76.)

End-point vulnerability or outcome vulnerability: This approach considers the impacts (or outcomes) of a projected change in climate on a particular biophysical, social 'exposure' unit. This framing is consistent with IPCC's Third Assessment Report which views vulnerability as a function of exposure, sensitivity and adaptive capacity (and the above IPCC definition that considers harm to be the 'adverse effect of climate change'). Climate change events or stresses upon an exposure unit are offset by adaptation produce outcomes. By viewing outcomes as direct impacts of hazards, end-point definitions tend to emphasize a proximate link between climate and disaster. They differ from 'starting-point' definitions by viewing outcomes as *the result of a climate event* rather than accounting for contextual mediating factors that make climate one among many stressing, varying and risk producing factors. The end-point or outcome definitions do not view vulnerability as a condition of the place-based social and economic arrangements that exists regardless of climate trends or events. Ironically, this definition places the focus on the hazard rather than on the 'outcomes' we care to avoid—such as economic loss or hunger. (O'Brien et al. 2007:75.) This is also called the 'risk-hazards' approach. Regardless of what they say their perspective is, when an author talks of vulnerability to a hazard, they are placing risk within the hazard and are taking a risk-hazard perspective. "We can only talk meaningfully about the vulnerability of a specified system to a specified hazard or range of hazards" (Brooks 2003) is the kind of telltale statement of a hazards thinker – whether they acknowledge this or not.

Internal vs. External sides of Vulnerability: Internal is the side of vulnerability considered to be endogenous or place based. Introduced by Chambers (1989), it refers to factors within the

vulnerable system. External refers to those factors outside of the vulnerable system, typically reflecting geographical boundaries or causal linkages of influence. (See Füssel 2007:158.)

Biophysical Vulnerability: Brooks (2003:4) defines physical or biophysical vulnerability as the “physical components associated with the nature of the hazard and its first-order physical impacts, and a biological or social component associated with the properties of the affected system that act to amplify or reduce the damage resulting from the first-order impacts.” This reads like a risk-hazards definition. It is attempting to graft on a more dynamic social side to the equation, but is rooted in a linear causal framing. The biophysical framing explores vulnerability as a measure of ‘outcomes’ rather than as a ‘state’ of the system. Hence, it is measured in mortality, costs, or ecosystem damages. Social vulnerability is then a state and can be seen as one of the causes of the biophysical vulnerability. “Biophysical vulnerability is a function of the frequency and severity (or probability of occurrence) of a given type of hazard, while social or inherent vulnerability is not.”

Antonyms for Vulnerability? Some analysts characterize ‘vulnerable’ as being on the opposite end of a spectrum from ‘capable’. They use the term ‘capability’ to counter the negativity of the term ‘vulnerability’, which they argue implies people are passive victims incompetent to resist hazards (see Ionescu et al. 2003 for a classic example vulnerability is modeled as a Lotka-Volterra predator-prey relation—with the hazard as predator).^{*} However, vulnerability and capability are distinct although partly inter-related. ‘Capacities depend on groups or some form of social organization, while vulnerabilities are socially-determined but the characteristic of individuals or households’ (Cannon, Twigg and Rowell n.d.:6-7). So, although they are not opposites, and ‘capable’ is not a positive replacement term for ‘vulnerable’, there is no logical reason that capacities could not be a scalar opposite of vulnerability. Higher capacity is likely to be correlated with reduced vulnerability. Vulnerability measures can include any factor that affects individual or household risk, among which capacities are certainly one scaled factor. (Cannon, Twigg and Rowell n.d.:6-7; also see Blaikie et al. 1994:9.) Pelling (2003:46) considers resilience to be the ‘reciprocal’ of vulnerability. Adger (2000:349) considers it to be a “loose antonym for vulnerability.”

Other Important Terms in the Climate-Action Literature

Risk: Probability of an event times its consequence is the classic definition of risk. This definition is used in engineering and in insurance calculations. Probability is usually

^{*} Hewett (1997:28) points out that “While ‘vulnerability’ suggests weakness and defenselessness, studies in this perspective actually challenge a common view of people as merely passive or unwitting victims of disaster. It is as much a question of the protection and active capacities people have, or are permitted, as the hazards they are exposed to and their innate weakness.”

SISU 419 Capstone

characterized as the likelihood in a given period. Consequence is usually characterized as some negative outcome in dollars or in specific losses of life or assets.

“The idea of ‘risk’ ... embraces exposure to dangers, adverse or undesirable prospects, and the conditions that contribute to danger.” “...Risk is, in the broadest sense, continuously and socially constructed. It promotes an active and adaptive view of the responsibility of human societies.” (Hewett 1979:22.) Hewett’s interpretation is important in so far as it explicitly takes a social constructivist view so as to be capable of attributing responsibility for dangerous conditions.

There is a struggle between narrow, essentially quantitative, technical view of risk and a broad social and cultural one. The narrow view seeks to estimate the probability of a certain measurable (adverse) outcome in a specific system or population.” This is often depicted “...as the only ‘scientific’ or sound approach.” (Hewett 23.) Hewett insists that in matters of public and environmental safety, these narrow definitions are not sufficient. Equity, responsibility, values and expectations must be taken into account. Calculation grids used in quantitative assessments are not sufficient for dangers for people and places in disasters where damages are unique and irreparable. Losses of life, loss of limb, changes in destruction of place, cannot be understood quantitatively. With these issues in mind Hewett takes a broader vernacular interpretation of risk. He suggests “A human ecology of risk ... whose purpose is to describe and interpret the conditions that endanger or improve the security of communities (Hewett 1997:24).

Risk is not catastrophe or disaster. It is anticipation of such (Beck 2009:9). Risk is not uncertainty. Knight (1921—in Beck 2009:18) states “Uncertainty must be taken in a sense radically distinct from the familiar notion of risk,... It will appear that a measurable uncertainty or a ‘risk’ proper...is so far distinct from an immeasurable one that it is not in effect an uncertainty at all.” Risk is also not danger; risk incorporates the notion of calculation, hence it gives a new weighting to the notion of a danger about which people might worry but do not have ‘scientific’ assessment of (Wilkinson 2010:23).

“Risk is a reflexive notion because it balances benefits against harms and makes the future decidable in the present” (Beck 2009:19). In being so, it has to judge the weight of both benefits and harms – which might accrue to different people at different times and at different scales of social and political organization. It is inherently, in this sense, a political notion.

Leach (2008:3) remarks “...risk, in its strict sense, is only one dimension of incertitude; others include uncertainty, where the range of possible outcomes is known but probabilities cannot be assigned; ambiguity, where incommensurable priorities or notions of harm prevail, and

ignorance, where neither outcome nor likelihoods are known, and the possibility of surprise is ever-present.”

Wilkinson (2010:39) states that risk is “...a numerical expression of both the likelihood of a detrimental outcome resulting from a particular course of action and the magnitude of the adverse consequences that may follow on from this.”

Experts use risk to mean “a calculation of probability.” In popular usage it is more a synonym for “danger.” “Social theorists present us with a range of interpretive frameworks for debating what is morally and politically at stake when ‘risk’ is used in the language of everyday life, particularly when this is brought to the fore as the signature motif of news reports on the problems of our day.” (Wilkinson 2010:58.)

For the Pressure and Release modelers (Turner et al 2003:8074), “...risk is explicitly defined as a function of the perturbation, stressor, or stress and the vulnerability of the exposed unit.” This is an attempt to include the hazards and the social system in a single model. But, the PAR model does not include the vulnerability of the biophysical system.

Hazard: “Something is a hazard to the extent that it threatens losses we wish to avoid” (Hewett 1997:25). Hazards are not physical agents alone. It is the possibility that the physical event will result in damage. Floods or dry spells that do not affect anyone are not hazards. “Whereas a hazards perspective tends to explain risk and disaster in terms of external agents and their impacts, vulnerability looks to the internal state of a society and what governs that.” (Hewett 1997:27-8.) Brooks (2003:3) defines hazard as “...physical manifestations of climatic variability or change, such as droughts, floods, storms, episodes of heavy rainfall, long-term changes in the mean values of climatic variables, potential future shifts in climatic regimes and so on. Climate hazards may be defined in terms of absolute values or departures from the mean or variables such as rainfall, temperature, wind speed, or water level, perhaps combined with factors such as speed of onset, duration and spatial extent. Hazards are also referred to as *climate events*.”

Damage: “...The empirical evidence of just how, where, and for whom danger is realized in harm.” “Harm done is the unequivocal measure of the protection people did not have, but do require.” (Hewett 1997:21.)

Adaptation: “Initiatives and measures to reduce the vulnerability of natural and human systems against actual or expected climate change effects. Various types of adaptation exist, e.g. anticipatory and reactive, private and public, and autonomous and planned. Examples are raising river or coastal dikes, the substitution of more temperature-shock resistant plants for sensitive ones, etc.” (IPCC AR4:Annex 1.)

In 2001 IPCC defined adaptation to climate change as "...adjustment in natural or human systems in response to actual or expected climatic *stimuli* or their effects, which moderates harm or exploits beneficial opportunities" (IPCC 2001:365; and in IPCC 2007:869). Nelson, Adger and Brown (2007:396) define adaptation as "the decision-making process and the set of actions undertaken to maintain the capacity to deal with current or future predicted change." They elaborate "Adaptation is a process of deliberate change in anticipation of or in reaction to external stimuli and stress. The dominant research tradition on adaptation to environmental change primarily takes an actor centered view, focusing on the agency of social actors to respond to specific environmental stimuli and emphasizing the reduction of vulnerabilities. The resilience approach is systems orientated, takes a more dynamic view, and sees adaptive capacity as a core feature of resilient social-ecological systems." (Nelson, Adger and Brown 2007:395.) They argue (2007:396) "...that adaptation to environmental change is best formulated as an issue of system resilience...." They state (397) "We define *adaptation* as the decision-making process and the set of actions undertaken to maintain the capacity to deal with future change or perturbations to a social-ecological system without undergoing significant changes in function, structural identity, or feedbacks of that system while maintaining the option to develop. In contrast to adaptation, Nelson, Adger and Brown 2007:398 point out that "the resilience approach is founded on the understanding that the natural state of a system is one of change rather than one of equilibrium." See also discussion of adaptation under 'resilience' as adaptation in a resilience framework.

Adaptive capacity: "The whole of capabilities, resources and institutions of a country or region to implement effective adaptation measures." (IPCC AR4:Annex 1.)

Nelson, Adger and Brown (2007:400) define *adaptive capacity* as "...a way to describe the preconditions necessary for a system to be able to adapt to disturbances. It is represented by the set of available resources and the ability of the system to respond to disturbances and includes the capacity to design and implement effective adaptation strategies to cope with current or future events (13). Resources include economic capital, technology and infrastructure, information, knowledge, institutions, the capacity to learn, and social capital (38, 40, 44, 45). Adaptive capacity also has direct implications for the type and scale of adaptation that is possible for the system to achieve." Note that this definition then relies largely on how the system boundaries are drawn. It also depends deeply on how system characteristics are specified – that is what theories of social and political economic change are applied to the 'social' portion of the 'system'.

Yohe and Tol (2002:27) characterize vulnerability with respect to adaptive capacity as $V = F\{E(A);S(A)\}$.

Where:

SISU 419 Capstone

V = Vulnerability

E = Exposure

S = Sensitivity

A = Adaptive Capacity = $AC\{D1, D2...Dn\}$

D = Determinants listed on previous page

AC = left undefined, but I assume it is = A or adaptive capacity

This equation, but placing V as a function of seems to place risk within the hazard by characterizing E and S as static and only the response to that state (A) as variable.

This discounts, but does not preclude, an analysis of the production of risk in history.

They also have a bias toward the proximate: "...read carefully through the determinants of adaptive capacity to recognize that the local manifestations of micro-scale determinants of adaptive capacity are their most critical characteristics" (Yohe and Tol 2002:28).

Adaptedness: Nelson, Adger and Brown (2007:400) define *adaptedness* as "a state in which a system is effective in relating with the environment and meets the normative goals of stakeholders."

Mitigation: "Technological change and substitution that reduce resource inputs and emissions per unit of output. Although several social, economic and technological policies would produce an emission reduction, with respect to climate change, mitigation means implementing policies to reduce GHG emissions and enhance sinks." (IPCC AR4.) "Mitigation refers to actions that reduce exposure to changes, for example, through regulation, location, or technological shifts" (Nelson, Adger and Brown 2007:397).

Resilience: Following Adger (2000:349) "Resilience increases the capacity to cope with stress and is hence a loose antonym for vulnerability" (also see Pelling [2003] who considers resilience to be "the ability of an actor to cope with or adapt to hazard stress"). Adger continues, "...social and ecological systems are themselves linked, in ways which Norgaard (1994) and others have likened to synergistic and coevolutionary relationships. Clearly "...the direct dependence of communities on ecosystems is an influence on their social resilience and ability to cope with shocks, particularly in the context of food security and coping with hazards" (Adger 2000:354). Ecosystem resilience is clearly also linked to human intervention. Some antonyms include 'Sensitivity', defined as the degree to which a system is instantly affected by perturbations (Fussel 2007:158). It should also be noted that many authors use the word 'resilience' colloquially to mean the ability to bounce back (see, Douglas 1985:54;). Nelson, Adger and Brown (2007:396) define it as "the amount of change a system can undergo and still retain the

same function and structure while maintaining options to develop.” In contrast to adaptation, Nelson, Adger and Brown 2007:398 point out that “the resilience approach is founded on the understanding that the natural state of a system is one of change rather than one of equilibrium.” They continue (2007:399) “The resilience framework has developed to incorporate ideas of complex systems and in so doing emphasizes the functioning of the social-ecological system as a whole. The focus is on the relationships between the system components, not on the functioning of individual components in isolation. Rather, it is concerned with context, feedbacks, and connectedness of system components. This is a fundamental difference with the adaptation to environmental change literature, which is focused on actors.” They continue “Actor-based analysis looks at the process of negotiation and decisions, and the systems-based analysis examines the implications of these processes on the rest of the system. The systems perspective also contains a temporal element that is important to the concept of adaptation. It considers adaptation not in light of specific activities but rather in how activities feedback, either positively or negatively, into the system as a whole through time.” They reiterate later (2007:402) that “standard adaptation approaches foster adaptation that will lead to a state in which the socialecological system deals effectively with perceived risks. Adaptation in a resilience framework, by contrast, promotes managing the capacity of the system to cope with future change.” They later add (2007:412): “A key contribution of resilience derives from the core understanding that change is a fundamental aspect of any system.”

There are ecological systems theory roots to the term resilience as it is often used in the analysis of human-climate relations. Hence, while the above definitions tell us what resilience is – ‘the capacity to cope’ – they do not tell us how it is modeled or explained. [Develop this definition during the section on ‘resilience’.]

Sensitivity: The degree to which a system is instantly affected by perturbations (Füssel 2007:158).

Social Resilience: Adger (2000:347) “...defines social resilience as the ability of groups or communities to cope with external stresses and disturbances as a result of social, political and environmental change.” Adger (2000:349) states “...it is important to note that, because of its institutional context, social resilience is defined at the community level rather than being a phenomenon pertaining to individuals. Hence it is related to the social capital of societies and communities.” His observation here, however, has an implicit set of assumptions about how societies work – placing institutional relations within ‘social capital’ and viewing the individual as being observable outside of ‘community’. I would argue that the individual is always embedded – within political-economic and social relations (see Watts and Bohle 1992). ‘Social capital’ is too narrow a view of institutional location.

Ecological Resilience: Adger (2000:347) defines ecological resilience as “...a characteristic of ecosystems to maintain themselves in the face of disturbance.” “For natural ecosystems, vulnerability can occur when individuals or communities of species are stressed, and where thresholds of potentially irreversible changes are experienced through environmental changes.” Ecological resilience specifies the ecosystem as the value at risk. It is a system-level concept. It is not about the stability of individual species, but of the ecosystem as a whole. Ecological resilience combines the shock a system can absorb prior to changing and the rate of recovery after a change (Adger 2000:349). The abilities to absorb shock and to recover have been related to ecosystem diversity – however, this relation is not at all clear and remains controversial. These two aspects are also taken to be definitions by different scholars. Some define resilience as the shock that can be absorbed without collapse and others define it as the rate of recovery after a shock.

Robustness: Leach (2008:3) distinguishes between resilience, which is the ability to respond to shocks, and robustness, which is the ability to respond to stress. She argues that “the STEPS pathways approach distinguishes four possible kinds of strategy to deal with change: control to address short term shocks (stability) or long-term stresses (durability), and response to shocks (resilience) or to stresses (robustness).”

Coping Strategies: “Coping strategies are actions taken by households when faced with extreme food insecurity which might be caused by diverse factors, from climatic extremes to wars. They are, in effect, short-term adjustments and adaptations to extreme events, are usually involuntary and almost invariably lead to a different subsequent state of vulnerability to future famine situations.” (Adger 2000: 457.)

Resistance: Pelling (2003:48) defines resistance as “...the ability of an actor to cope with or adapt to hazard stress.” He considers it to be a function of economic, psychological and physical health and of maintenance of systems and to be a reflection of the capacity of the individual or group to withstand the stresses associated with hazards. For Pelling (2003:47) vulnerability consists of exposure, resistance and resilience, where exposure is hazard stress, resistance is the ability to withstand that stress, and resilience is the ability to cope with, adapt to or recover after damage. In the urban context he sees insurance as the key option for enhancing resilience by spreading risk across society and over time.

Impact: This is a term coming from the ‘hazards’ literature that implies that a given event can be associated with an outcome that it caused. A storm causes damage. Those damages are the ‘impacts’ of the storm’ in the hazards literature. But, beware of the use of this term. It is often used by vulnerability scholars who, by dint of using it, are attributing causality to the hazard. It is just a bad habit to fall back on the definitions they grew up with and which seem intuitively clear – despite that they are introducing ambiguity.

Criticality: Criticality ‘refers to situations in which the extent or rate of environmental degradation precludes the continuation of current use systems or levels of human well being, given feasible adaptations and societal capabilities to respond’ (Kasperson *et al.*, 1995: 25 in Adger 2000:348). Criticality is therefore a state of a resource system or geographical place or region’s ecosystem that combines ecological and social conditions. It is that point at which social response can no longer stave off ecological decline or collapse. Criticality is ecological, hence, people may not be vulnerable in the face of ecosystem criticality or collapse. Hence, this concept allows for a separate analysis of social vulnerability but provides for a social dimension to ecological vulnerability. (Adger 2000:349.)

Thresholds: Nelson, Adger and Brown (2007:401-2) argue that “thresholds represent the boundaries around a system state, which if crossed represent the transition into another system state.” They see thresholds as unpredictable and unforeseeable, often being perceived only after they have been crossed, shifting the system into a new state.

Policy Windows: Moments, such as the months after a disaster strikes, where public interest may create movements to push particular protective policies through.

Tipping Points:

Other useful terms: Exposure to stress, sensitivity and adaptive capacity are common elements of all models of vulnerability (Adger 2006:269).^{*} In the typical definitions in the literature, *stress* to which a system is *exposed* might include a continuous or slow-onset hazard (a stress or stressor) or a discrete event (a perturbation) (Füssel 2007:157). Here, ‘exposure is the nature and degree to which a system experiences environmental or socio-political stress. The characteristics of these stresses include their magnitude, frequency, duration and areal extent’ (Adger 2006:270—citing Burton *et al.* 1993). The factors that shape a system’s likelihood to incur damages are its *sensitivity* and *adaptive capacity*. *Sensitivity* describes the degree to which a system is changed following a perturbation or stress (Ager 2006:170). *Adaptive capacity* is its ability to adjust in ways that reduce sensitivity, increase resilience, or avoid damage—is also called the ability to *cope*. *Resilience* is also a common term in the vulnerability literature, referring ‘to the magnitude of disturbance that can be absorbed before a system changes to a radically different state as well as the capacity to self-organize and the capacity for adaptation to emerging circumstances’ (Adger 2006:269). These terms are used differently in different approaches to vulnerability analysis.

Emancipation: To be developed.

Enfranchisement: Adding to Amartya Sen’s analysis of ‘entitlements’, Appadurai (1984:481) defines enfranchisement as “the degree to which an individual or group can legitimately participate in the decisions of a given society *about* entitlement.” He goes on to say “Famines raise questions about the relationship between entitlement and enfranchisement in any society, at any moment in history.” The inextricable link between famine and emancipation is clear. When and why does any group within society lose their ability to influence society toward their own protection? What is the moral basis of subsistence relations in times of famine?

University-Wide Policies You Should be Familiar With

Academic Integrity

Standards of academic conduct are set forth in the university’s Academic Integrity Code. By registering for this course, students have acknowledged their awareness of the Academic Integrity Code and they are obliged to become familiar with their rights and responsibilities as defined by the Code. Violations of the Academic Integrity Code will not be treated lightly and disciplinary action will be taken should violations occur. This includes cheating, fabrication, and plagiarism.

Defining and Reporting Discrimination and Harassment (Title IX)

American University expressly prohibits any form of discrimination and discriminatory harassment including sexual harassment, dating and domestic violence, sexual assault, and stalking. The University is an equal opportunity, affirmative action institution that operates in compliance with applicable laws and regulations. AU does not discriminate on the basis of race, color, national origin, religion, sex (including pregnancy), age, sexual orientation, disability, marital status, personal appearance, gender identity and expression, family responsibilities, political affiliation, source of income, veteran status, an individual's genetic information, or any other bases under federal or local laws in its programs and activities.

As a faculty member, I am required to report discriminatory or harassing conduct to the university if I witness it or become aware of it – regardless of the location of the incident. There are four confidential resource on campus if you wish to speak to someone who is not required to report: Counseling Center, victim advocates in OASIS, medical providers in the Student Health Center, and ordained clergy in the Kay Spiritual Life Center. If you experience any of the above, you have the option of filing a report with [University Police](#) (202-885-2527), the [Office of the Dean of Students](#) (dos@american.edu or 202-885-3300), or the [Title IX Office](#) (202-885-3373 or TitleIX@american.edu). For more information, including a list of supportive resources on and off-campus, contact OASIS (oasis@american.edu or 202-885-7070) or check out the [Support Guide on the Title IX webpage](#).

Emergency Preparedness

In the event of an emergency, American University will implement a plan for meeting the needs of all members of the university community. Should the University be required to close for a period of time, we are committed to ensuring that all aspects of our educational programs will be delivered to our students. These may include altering and extending the duration of the traditional term schedule to complete essential instruction in the traditional format and/or the use of distance instructional methods. Specific strategies will vary from class to class, depending on the format of the course and the timing of the emergency. Faculty will communicate class-specific information to students via AU email and Blackboard, while students must inform their faculty immediately of any emergency-related absence. Students are responsible for checking their AU email regularly and keeping themselves informed of emergencies. In the event of an emergency, students should refer to the AU Student Portal, the [AU website](#), and the AU information line at (202) 885-1100 for general university-wide information, as well as contact their faculty and/or respective dean's office for course and school/college specific information.

Incomplete Policy

At the discretion of the faculty member and before the end of the semester, the grade of I (Incomplete) may be given to a student who, because of extenuating circumstances, is unable to complete the course during the semester. The grade of Incomplete may be given only if the student is receiving a passing grade for the coursework completed. Students on academic

probation may not receive an Incomplete. The instructor must provide in writing to the student the conditions, which are described below, for satisfying the Incomplete and must enter those same conditions when posting the grades for the course. The student is responsible for verifying that the conditions were entered correctly.

Conditions for satisfying the Incomplete must include what work needs to be completed, by when the work must be completed, and what the course grade will be if the student fails to complete that work. At the latest, any outstanding coursework must be completed before the end of the following semester, absent an agreement to the contrary. Instructors will submit the grade of I and the aforementioned conditions to the Office of the University Registrar when submitting all other final grades for the course. If the student does not meet the conditions, the Office of the University Registrar will assign the default grade automatically.

The Associate Dean of the Academic Unit, with the concurrence of the instructor, may grant an extension beyond the agreed deadline, but only in extraordinary circumstances. Incomplete courses may not be retroactively dropped. An Incomplete may not stand as a permanent grade and must be resolved before a degree can be awarded.

Student Code of Conduct

The central commitment of American University is the development of thoughtful, responsible human beings in the context of a challenging yet supportive academic community. The [Student Code of Conduct](#) is designed to benefit the American University community and to assist in forming the highest standards of ethics and morals among its members. By registering for this course, students have acknowledged their awareness of the Student Code of Conduct and they are obliged to become familiar with their rights and responsibilities as defined by the Code.

Religious Observances

Students will be provided the opportunity to make up any examination, study, or work requirements that may be missed due to a religious observance, provided they notify their instructors before the end of the second week of classes. Please send this notification through email to the professor. For additional information, see American University's [religious observances policy](#).

Use of Student Work

The professor will use academic work that you complete for educational purposes in this course during this semester. Your registration and continued enrollment constitute your consent.

Academic Support Services You Should be Familiar With

Academic Support

All students may take advantage of the [Academic Support and Access Center \(ASAC\)](#) for individual academic skills counseling, workshops, Tutoring and Writing Lab appointments, peer tutor referrals, and Supplemental Instruction. The ASAC is located in Mary Graydon Center 243.

Additional academic support resources available at AU include the Bender Library, the Department of Literature's Writing Center (located in the Library), the Math Lab in the Department of Mathematics & Statistics, and the Center for Language Exploration, Acquisition, & Research (CLEAR) in Anderson Hall, Room B-10I. A more complete list of campus-wide resources is available in the ASAC.

International Student & Scholar Services

[International Student & Scholar Services](#) has resources to support academic success and participation in campus life including academic counseling, support for second language learners, response to questions about visas, immigration status and employment and intercultural programs, clubs and other campus resources. (202-885-3350, Butler Pavilion 410).

Writing Center

The [Writing Center](#) offers free, individual coaching sessions to all AU students. In your 45-minute session, a student writing consultant can help you address your assignments, understand the conventions of academic writing, and learn how to revise and edit your own work. (202-885-2991, Bender Library – 1st Floor Commons).

Student Support Services You Should be Familiar With

Center for Diversity & Inclusion (CDI)

[CDI](#) is dedicated to enhancing LGBTQ, multicultural, first-generation, and women's experiences on campus and to advancing AU's commitment to respecting and valuing diversity by serving as a resource and liaison to students, staff, and faculty on issues of equity through education, outreach, and advocacy. It is located on the 2nd floor of Mary Graydon Center (202-885-3651, MGC 201 & 202).

Counseling Center

The [Counseling Center](#) offers counseling and consultations regarding personal concerns, self-help information, and connections to off-campus mental health resources. (202-885-3500, MGC 214).

Dean of Students Office

The [Dean of Students Office](#) offers individual meetings to discuss issues that impact the student experience, including academic, social, and personal matters; making referrals to appropriate campus resources for resolution. Additionally, while academic regulations state that medical absences are to be excused, if faculty require documentation to verify the student's explanation, such documentation should be submitted to the Dean of Students. The office will then receive the documentation and verify the medical excuse. Faculty have the discretion to approve absences and do not need permission from the Dean of Students to excuse absences. Students should be sent to the Dean of Students only if faculty require further proof or if they have concerns about the impact of absences on the student's ability to succeed (202-885-3300, Butler Pavilion 408).

Food and Housing Insecurity Statement

Any student who faces challenges securing their food or housing and believes this may affect their performance in the course is urged to contact the [Dean of Students](#) (dos@american.edu) for support. Furthermore, please notify the professor if you are comfortable in doing so. This will enable them to provide any resources that they may possess.

Office of Advocacy Services for Interpersonal and Sexual Violence

[OASIS](#) provides free and confidential advocacy services for students who have experienced sexual assault, dating or domestic violence, sexual harassment, and/or stalking. Please email or call to schedule an appointment with a victim advocate in OASIS. (oasis@american.edu, 202-885-7070, Health Promotion and Advocacy Center – Hughes Hall 105). Students can also book an appointment with one of our two confidential victim advocates.

Respect for Diversity

As stated in the [American University Discrimination and Sexual Harassment Policy](#):

"American University is an equal opportunity, affirmative action institution that operates in compliance with applicable laws and regulations. The University does not discriminate on the basis of race, color, national origin, religion, sex, pregnancy or parenting, age, sexual orientation, disability, marital status, personal appearance, gender identity and expression, family responsibilities, political affiliation, source of income, veteran status, an individual's genetic information or any other bases under applicable federal and local laws and regulations (collectively "Protected Bases") in its programs and activities. The University expressly prohibits any form of discriminatory harassment including sexual harassment, dating and domestic violence, rape, sexual assault, sexual exploitation and stalking."

The above website includes further details, including how to report instances of discrimination and your responsibilities as a member of the campus community in relation to the policy; you are strongly encouraged to familiarize yourself further with this policy.

Class rosters and University data systems are provided to faculty with the student's legal name and legal gender marker. As a student, you are able to change how your preferred/proper name shows up through email, Blackboard, and on your AU ID Card. This option is helpful for various student populations, including but not limited to: students who abbreviate their first name; students who use their middle name; international students; and transgender students. As a faculty member, I am committed to using your proper name and pronouns. We will take time during our first class together to do introductions, at which point you can share with all members of our learning community what name and pronouns you use, as you are comfortable. Additionally, if these change at any point during the semester, please let me know and we can develop a plan to share this information with others in a way that is safe for you. Should you want to update your preferred/proper name, you can do so by looking at the [guidelines and frequently asked questions](#) from the Center for Diversity and Inclusion.

Students with Disabilities

If you wish to receive accommodations for a disability, please notify me with a letter from the Academic Support and Access Center. As accommodations are not retroactive, timely notification at the beginning of the semester, if possible, is strongly recommended. To register with a disability or for questions about disability accommodations, contact the Academic Support and Access Center at 202-885-3360 or asac@american.edu, or drop by MGC 243. For more information, visit AU's [Disability Accommodations web page](#).

⁴ Recommended readings on the concept of risk:

Risk is an important concept in vulnerability studies. This reading is all background to understanding this important concept. Typically in climate change circles it is used merely to mean probability times consequence – this is the engineering definition – but there is a much richer history of its use and meanings. It is worth being familiar with them.

[In this article the 'capitals' frame is used to develop vulnerability indicators.]

¹³ On Environment and Structural Violence and on Structure-Agency Debates

When explaining the causes of anything, both agency and structure will emerge. They operate at different scales of analysis. How do different framings count for them and relate them to each other? Think about what the implications are of emphasizing (or ignoring) one frame or scale, the proximate over the distal or structural, over another in an analysis of the causes of climate-related vulnerability. How would such narrow focuses or omissions shape how we understand cause and how policy is created in order to treat climate related vulnerabilities? Also think about how scale, structure and agency are linked to responsibility, liability and blame.
